SUMMARY

Frontend-focused developer (B.Tech, Computer Science) with hands-on experience building reusable, responsive UI components and dashboards using React and TypeScript across multiple real projects. Comfortable integrating frontend applications with REST APIs and JSON data, and translating requirements into working, user-facing interfaces. Experience with Git/GitHub version-control workflows, debugging, automated testing (Playwright), and performance optimization. Strong problem-solving and analytical skills, backed by 500+ solved DSA problems, and comfortable collaborating with developers and stakeholders on shared products. Fast learner who picks up new frameworks, standards, and enterprise tooling quickly.

EDUCATION

The LNM Institute of Information Technology, Jaipur, India

Jul 2023 – Jul 2027

B.Tech in Computer Science and Engineering

Relevant coursework: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, System Design

EXPERIENCE

SDE Intern — Nahar Industrial Enterprises Ltd.

Jun 2025 – Jul 2025

Remote

- Wrote Python scripts to automate data analysis and reconciliation across 200+ SAP records/transactions, reducing manual effort and improving accuracy over spreadsheet-based checks
- Worked with ABAP to interact with SAP modules programmatically, gaining hands-on exposure to SAP-based enterprise resource planning (ERP) workflows and system integration across core business functions
- Collaborated with cross-functional teams to document workflows and technical processes, supporting process standardization

PROJECTS

Gitpulse | Next.js, Node.js, Express.js, Pinecone, Groq, BullMQ, Docker, AWS | [GitHub](#)

Jul 2026 – Aug 2026

- Built a React (Next.js) frontend with reusable UI components for an AI-powered developer tool, creating a responsive chat-style interface that integrates with REST APIs and JSON responses from backend services
- Collaborated on backend integration (Node.js/Express.js) to keep the UI responsive while codebases of 10,000+ files were processed asynchronously — debugging and testing to ensure smooth performance
- Followed Git/GitHub version-control workflows and coding standards throughout; deployed the frontend to Vercel

MailPilot | Next.js, TypeScript, PostgreSQL (pgvector), Gemini, Auth.js | [GitHub](#)

May 2026 – Jun 2026

- Built the React/Next.js (TypeScript) frontend for an email productivity app, designing dashboard-style views for inbox triage — organizing, summarizing, and displaying AI-generated replies (Gemini API)
- Integrated the UI with a REST API layer backed by PostgreSQL, keeping the interface responsive while queries executed across thousands of records in under 50ms
- Implemented client-side authentication (Auth.js/NextAuth with Google sign-in) and followed coding standards and Git-based workflows throughout development

OARFIN | React-Leaflet, Express.js, Node.js, Redis, Playwright | [GitHub](#)

Mar 2025 – Jun 2025

- Owned front-end architecture of a disaster-management web app, building responsive, production-ready React (React-Leaflet) operational dashboards with real-time geospatial views for hospitals and shelters
- Integrated the dashboards with REST APIs from an Express.js/Node.js backend, and collaborated with the team to cut end-to-end response latency by 40% for real-time routing
- Contributed to UX improvements on onboarding flows and validated them with 12+ automated Playwright tests for debugging and performance checks; followed Git-based workflows throughout

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, HTML, CSS, Responsive UI, Reusable Components

Languages: JavaScript, TypeScript, Python, SQL, ABAP, C, C++, Java

API Integration: REST APIs, JSON, Client-Side Data Fetching, Authentication (JWT, OAuth)

Testing & Debugging: Playwright (automated end-to-end / UI testing), performance optimization

Developer Workflow: Git, GitHub, Postman, Chrome DevTools, VS Code, Coding Standards

Backend & Databases (supporting): Node.js, Express.js, MongoDB, PostgreSQL (pgvector), MySQL, Redis

Cloud & DevOps: Vercel, AWS (EC2), Docker, GitHub Actions (CI/CD)

Core Concepts: Data Structures & Algorithms, OOP, DBMS, System Design, Full-Stack Development

AI/ML (additional): LLM API Integration (Gemini, Groq), AI-Assisted Development (GitHub Copilot, Claude)

ACHIEVEMENTS

- Secured Runner-Up (2nd position) in the LNMIIT HackCrux Hackathon among 50+ teams for developing OARFIN, an AI-enabled real-time emergency response and geospatial navigation platform
- Solved 500+ Data Structures & Algorithms problems across LeetCode and other competitive programming platforms
